Practical 1: To describe component of network

1. Clients: Customers of the network, as they request and receive services from the servers.
2. Servers: Computers that hold shared resources and provide access to this resources to all the users of network.
3. Communication: Transmission of data between two or more connecting nodes.
4. Protocols: Set of rules which defines how data is transmitted between different devices.
5. Ports: Port is nothing but communication endpoint.
6. Network: It is a collection of computers, servers, network devices, peripherals or other devices connected to one another to allow the sharing of data.
